

INVESTOR PITCH DECK

The social influence platform for Haitian voices.

Gran Boulva turns debate, prediction, and community opinion into status, creator identity, and eventually monetization.

Debate

Core behavior

Predict

Habit loop

Influence

Economic layer

Haitian conversation is massive, emotional, and fragmented.

Scattered

Debates live across TikTok comments, WhatsApp groups, Facebook, YouTube, and X.

Unstructured

Good opinions disappear. There is no trusted scoreboard for community voices.

Unmonetized

Creators generate engagement, but general platforms capture most of the value.

The audience has attention and voice. It lacks dedicated infrastructure.

A structured public square built around opinions, predictions, and influence.

Vote

Two-sided matchups turn culture into fast participation.

Argue

Top arguments create reputation, not just noise.

Predict

Users build credibility by being early and right.

Earn Status

Rankings, badges, streaks, and creator profiles make influence visible.

Opinions become social currency.

A focused wedge with expansion potential.

15M+

Global Haitian population signal

Broad identity market, not immediate reachable users.

100K-300K

First serious community scale

Diaspora and digitally active Haitian users.

Caribbean+

Expansion path

Replicate the model across culturally expressive communities.

The real starting audience: socially expressive Gen Z/millennial Haitian users, creators, commentators, music fans, sports fans, diaspora communities, and cultural pages.

MVP focused on habit, not bloat.

Build First

- Matchups and voting
- Argument threads
- Profiles and rankings
- Prediction settlement
- Share cards
- Moderation/admin tools

Build Later

- Creator subscriptions
- Advanced recommendation AI
- Live debate rooms
- Complex paid visibility markets
- Regional expansion categories

Product principle: make reputation compound before monetization becomes heavy.

Status-led monetization.

Boulva Coins

Boosts, creator support, cosmetics, streak recovery, and premium participation.

Creators

Support fees, subscriptions, premium communities, live debate events, sponsorship tools.

Brands

Sponsored matchups, prediction campaigns, event partnerships, native cultural advertising.

The early monetization rule: sell identity and support, not unfair dominance.

Growth starts where Haitian attention already lives.

Creator Seeding

Recruit 20-50 founding voices across music, politics, comedy, sports, and diaspora life.

Share Loops

Matchup results, rankings, prediction receipts, and debate callouts built for TikTok, Instagram, and WhatsApp.

Community Partnerships

Diaspora events, campus groups, podcasts, DJs, radio hosts, meme pages, and cultural organizations.

Avoid broad paid acquisition early. Use culturally specific topics that people feel compelled to answer publicly.

AI supports the community; it does not replace it.

Recommendation

Personalized feed balancing interest, discovery, and perspective broadening.

Boulva Scout

Trend-sourcing engine for Haitian news, social content, events, and debate prompts.

Moderation

AI-assisted toxicity detection, reports, trust scores, and human review for sensitive topics.

Long-term data advantage: topic graph, reputation graph, prediction history, and creator influence graph.

Gran Boulva competes for attention, not just features.

Platform	They Win At	Gran Boulva Opening
TikTok	Entertainment and discovery.	Non-video opinions and structured debate.
Facebook / WhatsApp	Existing networks and private groups.	Public influence, ranking, and discovery.
YouTube / Podcasts	Long-form creator authority.	Participation layer for the audience.
X / Reddit	Fast public discourse.	Cultural fluency, safer norms, Haitian-first relevance.

Realistic, milestone-based projections.

Year	User Target	Revenue Range	Operating Focus
1	25K-75K registered; 2K-8K DAU	\$25K-\$150K	PMF, retention, moderation, creator seeding.
2	100K-350K registered; 12K-45K DAU	\$300K-\$1.5M	Creator monetization, sponsorship repeatability.
3	350K-1.2M registered; 50K-180K DAU	\$1.5M-\$8M likely; \$15M upside	Regional expansion and payer growth.

Break-even likely requires \$35K-\$80K monthly revenue, depending on team size, moderation, infrastructure, and paid growth.

Execution roadmap.

30 Days

MVP scope, topics, moderation rules, founding creator list.

90 Days

Private beta, daily matchups, share cards, retention tests.

6 Months

Public launch, ambassador network, coins light, event pilots.

12 Months

Creator identity, monetization proof, sponsor repeatability.

The milestone that matters most is not downloads. It is repeated participation from the same users around culturally relevant topics.

From Haitian debate app to cultural influence infrastructure.

If Gran Boulva wins, it becomes the place where Haitian voices are ranked, discovered, supported, and monetized. The expansion path is Caribbean and diaspora communities that share the same need: culturally fluent social infrastructure where identity, opinion, and influence matter.

The long-term asset is not the feed. It is the trusted map of who moves culture.

What funding unlocks.

Product

MVP hardening, mobile polish, ranking systems, analytics, and creator tools.

Trust

Moderation systems, community operations, safety workflows, sensitive-topic controls.

Growth

Creator seeding, cultural partnerships, launch campaigns, event integrations.

Fundraising becomes strongest after proof of retention: 25K+ users, 3K-5K DAU, 20%+ week-4 retention, and organic sharing into TikTok/Instagram/WhatsApp.
